Probability and `atlas-preamble`

Responsible for `probability` module: Tassilo Schwarz[*]

April 18, 2022

1 Introduction

To use probability notation and packages in your document, use `atlas-preamble`, use the `probability` option:

`\usepackage[probability]{atlas-preamble}`

You then have the following benefits.

2 Basic probability notation

The most commonly used one is $\mathbb{P}[X + Y]$ and i.i.d. The `\iid` command solves for you every problem with spacing after `\iid`: You can either end the sentence afterwards or continue writing; the package will work the spacing out for you:

- Let X and Y be i.i.d. This is a new sentence.
- Let X be i.i.d. and Y be i.i.d.

But use `\iid` only in text mode.

Other elementary probability notation includes:

Expectation	Variance	Covariance	r-th Factorial Moment
`\E{a}{a+b}`	`\Var{a}{a+b}`	`\Cov{a}{A+u v^T}`	`\Efact{r}{X}`
$\mathbb{E}_{a}[a+b]$	$\mathrm{Var}_a[a+b]$	$\mathrm{Cov}_a\left(A+uv^T\right)$	$\mathbb{E}_r[X]$

If only one argument is given, the subscript will be left out.

3 Probability Distributions

The following probability distributions are implemented.

`\Bernoulli{p}`	`\Bin{n}{p}`	`\Po{c}`
Bernoulli (p)	Bin (n, p)	Po (c)
